PROFESSIONAL PROFILE

An Enterprise Technical Delivery professional who bridges Solution Architecture and specialist engineering teams, ensuring technical work is understood, coordinated, validated and production ready.

With more than 20 years' experience across enterprise SaaS environments, I specialise in technical delivery rather than project governance or hands-on engineering. My role is to understand complex technology landscapes, identify technical dependencies, facilitate engineering collaboration and help multidisciplinary teams deliver complex enterprise change successfully.

Known for quickly understanding unfamiliar technologies, asking the right technical questions and bringing together the right engineering disciplines to reduce delivery risk, validate operational readiness and achieve successful production outcomes.

CORE CAPABILITIES

- | | | |
|-----------------------------------|----------------------------------|----------------------------------|
| · Enterprise Technical Delivery | · Technical Operations | · Cloud Transformation |
| · Service Transition | · Technical Implementation | · Operational Readiness |
| · Technical Readiness Validation | · Production Cutovers & Go-Lives | · Cross-functional Collaboration |
| · Technical Dependency Management | · Technical Risk Assessment | · Enterprise Change |
| · Production Operations | · Major Incident Coordination | · Systems Thinking |

PROFESSIONAL EXPERIENCE

Senior Applications Specialist — Enterprise Technical Delivery

2008 – 2024

E2open (formerly BluJay Solutions / Kewill). Contributed to the technical delivery and operational readiness of enterprise SaaS platforms used by more than 3,000 global organisations, helping specialist engineering teams deliver cloud transformation, enterprise migrations, customer onboarding, security modernisation and complex production change.

Enterprise Cloud Transformation & Cost Reduction

- Objective:** Migrate more than 80 enterprise applications from an Equinix colocation facility to Oracle Cloud Infrastructure while reducing operational costs.
- Worked alongside Solution Architects and specialist engineering teams across infrastructure, networking, databases, DevOps and applications.
 - Facilitated technical collaboration across engineering disciplines throughout planning and production migration activities.
 - Validated technical readiness, identified cross-functional dependencies and challenged assumptions before production cutover.
 - Helped ensure the successful migration of 80+ enterprise applications, contributing to approximately £500,000 annual operating cost savings.

Enterprise SAP Migration & Business Continuity

CUSTOMER: SYSCO UK · DELIVERY PARTNER: CAPGEMINI

Objective: Deliver a business-critical SAP ERP transition while maintaining operational continuity.

- Worked alongside customer technical specialists, Solution Architects and multidisciplinary engineering teams.
- Coordinated technical readiness across networking, infrastructure, database and application teams.
- Validated VPN readiness, firewall changes, monitoring and end-to-end integration testing before production switchover.
- Facilitated technical workshops across multiple organisations to reduce implementation risk and improve operational readiness.

Customer Connectivity & Operational Readiness

CUSTOMER: HEINEKEN UK

Objective: Establish secure production connectivity between Heineken UK's head office and a new cloud-hosted enterprise platform.

- Facilitated collaboration between customer infrastructure teams and internal networking specialists.
- Coordinated VPN implementation, production connectivity validation and operational readiness activities.
- Worked alongside application specialists to verify successful end-to-end data exchange before production go-live.
- Ensured monitoring and operational acceptance activities had been completed before service transition.

Security Modernisation & Technical Debt Reduction

Objective: Modernise more than 3,000 enterprise customer integrations by replacing legacy HTTP and FTP with secure HTTPS SOAP, HTTPS REST and SFTP communications.

- Worked alongside networking, application and customer engineering teams to coordinate secure production implementation.
- Validated firewall readiness, customer source IP configuration and production connectivity.
- Coordinated end-to-end validation before retiring legacy services.
- Helped reduce enterprise technical debt while improving production security with minimal customer disruption.

Major Incident Coordination

Objective: Coordinate multidisciplinary engineering teams during Priority 1 production incidents affecting Tier 1 enterprise customers.

- Formed part of a 24/7 Priority 1 major incident rota for approximately seven years.
- Rapidly assembled engineering specialists across infrastructure, networking, databases, applications and development.
- Facilitated technical investigation, validated engineering assumptions and accelerated root cause identification.
- Communicated technically informed delivery updates while engineering teams focused on service restoration.

PERSONAL TECHNOLOGY PROJECTS

GraceCast — AI Production Console

Designed and prototyped an AI-assisted production console helping churches produce broadcast-quality live streams using a single wide-angle camera. Identified the operational challenge, evaluated multiple technical approaches and designed intuitive operator workflows that reduce volunteer workload while improving production quality. Prototyped using AI-assisted development tools, Python, HTML, CSS, JavaScript and GitHub.

Genesis — Band Management Platform

Designed and developed a secure cloud-based platform to simplify rehearsal planning, scheduling and communication for a worship band. Designed collaborative workflows with a strong emphasis on usability and accessibility, developing secure authentication, scheduling and communications capabilities through iterative user feedback.

Following a career break for health reasons, I have continued to develop professionally through AI-assisted software development, cloud technologies, personal technology projects and community volunteering. This period has reinforced my focus on enterprise technical delivery and strengthened my understanding of modern development workflows and AI-assisted productivity.

ADDITIONAL PROFESSIONAL EXPERIENCE

Broadcast, audio engineering & live production. Alongside my full-time career in enterprise technology, I have continued to work in broadcast, audio engineering and live production, strengthening my collaboration, troubleshooting and delivery skills in high-pressure environments. Assistant Producer and Podcast Editor at Gaydio (national radio station); professional session musician and audio engineer for commercial recordings, film soundtracks and live productions; live sound engineer supporting community and church events.
